

VLT (Velocity Gaming 2025 Split 2 and ascension) - Lotus Anti-Strat & Statistical Report

Opponent: Velocity Gaming (VLT 2025)

Map: Lotus

Analyzed Data: VOD Analysis and Statistical Aggregation of 3 matches played VS **S8UL**, **NS** and **NAOS** in around 2-3Hrs of time.

1. Roster, Statistical Profile, & Agent Roles

VLT runs a highly aggressive, momentum-driven composition.

Player	Agent	Avg KAST	Avg HS%	Total FK/FD	Stat Profile & Tendencies
damaraa	Neon	72%	26%	16 / 14 (+2)	The Spearhead: Averages a massive ~238 ACS. Extremely high first engagement rate. He is high-risk, high-reward, and statistically proven to overheat or trade evenly if not supported.
SkRossi	Chamber	64%	13%	16 / 5 (+11)	The Isolated Sniper: Incredibly efficient opening fragger (+11 FK diff). Almost zero assist output (only 5 assists across 3 matches), proving he plays heavily isolated on extreme flanks.
Russ	Breach	79%	41%	3 / 2 (+1)	The Enabler: The tactical mastermind. Avoids early fights (only 3 FKs in 3 matches) to stay alive and cast utility. Boasts a lethal ~41% headshot rate when he does shoot.
Lightningfast	Omen	70%	36%	0 / 4 (-4)	The Anchor: Massive fragging ceiling (peaked at 1.55 rating/24 kills). He never takes the opening duel (0 FKs across 3 series), cementing his role as the late-round clutch closer.
Madelyn	Fade	78%	24%	4 / 4 (0)	The Tracker: High assist generation (peaked at 16 in one match). Pairs heavily with Russ and damaraa to clear early neutral space.

2. Macro Playstyle & Identity

VLT does not play slow, passive Valorant. Their entire macro revolves around the **Russ + damaraa (Breach + Neon) synergy**. They skip standard default phases in favor of fast, grouped hits on Attack, and rely on raw aggression to fight for neutral space (Rubble (Damaraa and Russ) / Mound (SK Rossi and LightningFast)) on Defense.

3. Defense Strategy & Setups

Standard Site Setups

VLT completely abandons the B site early, relying strictly on a Chamber trap, to heavily stack A Rubble and C Mound.

Site	Standard Setup	Personnel	Objectives & Tendencies
A Site	2/3-Man Aggro	damaraa, Russ, Madelyn	Rubble Control: Constant early pushes into Rubble using Fade Prowlers and Breach stun. They rarely hold site passively.
B Site	1 + Trap	Russ	Information Only: B site is empty for the first 20 seconds. A Chamber trap watches B Main. Russ often holds A Link to support if the trap breaks.
C Site	1/2-Man Contact	SkRossi, Lightningfast	Mound Control: SkRossi and Lightningfast consistently push C Mound. Rossi takes aggressive Operator angles at C Lobby before teleporting out.

Economy & Mid-Round Tendencies

- **Lethal Eco Rounds:** VLT is dangerous on low buys. They frequently 4-man or 5-man stack a single zone (e.g., a 5-man B push or 4-man A push). They rely on Russ's and Mandelyn's utils layered with damaraa sliding in with a Bucky/Shorty to steal rifles.
- **The C-Door Retake Pivot:** If Attackers execute C, the A-Rubble pack (damaraa/Russ/Madelyn) will almost universally rotate through B, via the C-doors, and attempt a 3-man retake from the Mound/B-Main flank.
- **Over-Rotations:** Because B is empty at start, early pressure on C Mound often causes VLT to pull their A-players to B/C-doors prematurely.

4. Attack Strategy & Setups

Executes & Positioning

VLT's attacks are fast deathball hits, heavily reliant on perfect utility timing.

Round Type	Execution Style	Details
Pistols / Low Buys	5-Man Rushes	Predictable 5-man rushes directly to C or A. They do not fake on low buys.
Standard Buy	4-1 Split Exec	SkRossi (Chamber) plays solo (holding A Root or C Lobby flank) while the 4-man pack executes heavily on the opposite side.
Pivots	Fast Rotates	If an A hit stalls at Rubble/Tree, they instantly pivot through A Link to B, or all the way to C.

Key Synergies

- **The Breach and Neon:** Executes start with Madelyn (Fade) revealing the choke, followed instantly by Russ (Breach) stunning the lane, allowing damaraa (Neon) to slide in for the opening kill.
- **Deep Post-Plants:** Once the spike is down, Lightningfast (Omen) and damaraa (Neon) actively push out of site to establish deep crossfires or SK Rossi (Chamber) will hold the entry choke. Expect them to push C Waterfall, C Halls, or A Heaven to cut off rotations, rather than playing passively on the bomb.

5. Exploitable Weaknesses & Anti-Strats

1. Isolate SkRossi on Attack

- **The Flaw:** SkRossi mostly plays entirely disconnected from his team after first 15 seconds to watch flanks and find opening picks.
- **The Exploit:** Use aggressive defender pushes to hunt the Chamber early. Because the rest of VLT plays as a tight 4-man pack, picking off Rossi ruins their flank security and forces the pack to constantly check their backs. Do not let him dictate the opening engagements.

2. Punish damaraa's Overheat

- **The Flaw:** VLT plays on adrenaline. damaraa takes an absurd amount of first fights (30 opening duels across 3 maps) and is highly prone to pushing too deep.
- **The Exploit:** Bait the initial contact. Give up the extreme forward space (like C Mound or A Rubble) but hold deep crossfires. Let damaraa sprint into a 2v1 crossfire where Russ cannot easily stun for him.

3. Break the Breach-Neon Link

- **The Flaw:** damaraa mostly relies entirely on Russ's perfectly timed utility to safely entry.
- **The Exploit:** Suppress or pressure Russ. Use early initiator utility aimed at the Breach's typical supporting positions. If Russ is forced to use his utility defensively or is silenced, damaraa's entries become unsupported and easily punishable.

4. Punish the C-Door Retake Habit

- **The Flaw:** On defense, the A-players predictably retake C via the C-doors and flooding through B Main/Mound.
- **The Exploit:** When executing C, leave a dedicated lurker or heavy trap setup (Cypher trips/Viper mollied) specifically watching C-doors and B Main. They funnel heavily through this chokepoint.
